|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|--------------------------------------------|---------------------------------------|
| AI & ML Engineer (2026 graduate) with hands-on experience building production-grade AI systems. Developed SafeHer — a real-time voice distress detection system using Google Gemini AI with 95% confidence accuracy — and an ESP32-CAM deep learning rover for crop disease detection. Skilled in Python, FastAPI, TensorFlow, and Generative AI with a strong focus on building solutions that solve real-world problems. Experienced in data analytics using Python (Pandas, NumPy, Matplotlib, Seaborn), Power BI dashboards, and Excel for data cleaning, visualization, and reporting. |                                                        |                                            |                                       |
