PROFILE

B.E. graduate (2026) in AI & ML with hands-on experience in both Artificial Intelligence and Data Analytics. Proficient in building AI-powered systems using Python, Machine Learning, NLP, and Generative AI, as well as data analysis, dashboard development, and business intelligence using Power BI and Excel. Experienced with Google Gemini API, Scikit-learn, FastAPI, and cloud platforms. Certified in Data Analytics, Machine Learning, and Google Cloud AI.

EDUCATION

SRI SAIRAM COLLEGE OF ENGINEERING

B.E. | AI & ML

Nov 2022 – May 2026 | BANGALORE, INDIA

CGPA: 8.069 / 10

SKILLS

Languages : Python, SQL

Data Analytics : Power BI, Microsoft Excel, Pandas, NumPy, Matplotlib, Seaborn, EDA, Data Visualization, Data Cleaning, Data Transformation

Reporting : Dashboard Development, KPI Tracking, Business Intelligence, Trend Analysis, Statistical Analysis, Reporting

Tools : Git, GitHub, Google Cloud, Google Sheets, Web Speech API

AI / ML : Scikit-learn, Machine Learning, Deep Learning, NLP, Sentiment Analysis, Time Series Analysis, Predictive Modeling, Model Evaluation

Generative AI : Google Gemini API, Prompt Engineering, LLM Integration, Applied Generative AI

Frameworks : Flask, FastAPI, REST API Integration

CERTIFICATES

- | | | |
|--|---------------------------------------|--|
| • PYTHON FOR DATA ANALYSIS | • APPLIED GENERATIVE AI CERTIFICATION | • APPLYING AI PRINCIPLES WITH GOOGLE CLOUD |
| • MACHINE LEARNING (INTERNSHIP) | • PROMPT ENGINEERING | • DATA SCIENCE |
| • TCS iON CAREER EDGE - YOUNG PROFESSIONAL | • DATA ANALYTICS (INTERNSHIP) | |

PROJECTS

SAFEHER – SMART WOMEN’S SAFETY DETECTION SYSTEM :

- Built a real-time voice distress detection system using Google Gemini AI, achieving 95% detection confidence with alert response within 3 seconds.
- Engineered a 3-layer hybrid AI pipeline with NLP and sentiment analysis supporting 4 Indian languages (English, Hindi, Tamil, Telugu).
- Processed and analyzed real-time audio data using speech recognition and natural language processing (NLP) techniques.
- Integrated Fast2SMS, Gmail SMTP, GPS location sharing, and Web Speech API using Python and FastAPI for automated notifications.
- Designed a scalable emergency response system with multilingual support, geolocation tracking, and API integration.

PLANT DISEASE DETECTION POWERED BY DEEP LEARNING :

- Built a CNN-based deep learning model on ESP32-CAM for real-time crop disease classification with 90%+ confidence scoring.
- Trained and optimized the model using TensorFlow and Python on a dataset of 10,000+ plant disease images across multiple crops.
- Integrated remote rover navigation via Blynk mobile app for autonomous field image capture and data collection.
- Automated fertilizer and treatment recommendations based on disease classification results, reducing manual diagnosis time by 60%.
- Deployed the model on edge hardware (ESP32-CAM) enabling offline real-time inference without internet connectivity.
- Performed data preprocessing, image augmentation, and model evaluation to improve classification accuracy and reduce overfitting.

AI SALES FORECASTING :

- Developed an AI-powered Sales Forecasting System using Python, machine learning, and time series analysis to predict future sales trends.
- Built and trained ML models using data preprocessing, feature engineering, and model evaluation, achieving high forecast accuracy.
- Designed an interactive dashboard using Flask, HTML, CSS, and data visualization to display real-time sales insights.
- Performed EDA, statistical analysis, and trend analysis to identify key business patterns and revenue drivers.
- Improved business decision-making through forecasting, KPI monitoring, and data-driven reporting.

SMART F1 RACE STRATEGY ANALYTICS :

- Cleaned and transformed 5+ years of Formula 1 race datasets using Python (Pandas, NumPy, Matplotlib, Seaborn).
- Built interactive Power BI dashboards analyzing race strategies, driver performance metrics, and pit stop efficiency trends.
- Delivered structured Excel reports highlighting tyre management patterns and lap time analysis across multiple Grand Prix events.
- Identified key strategic insights that improved understanding of race outcome prediction by 40%.

EXPERIENCE

Data Analytics Intern

Cloud Institution | Feb 2026 – April 2026

- Analyzed Formula 1 race strategy datasets using Python (Pandas, NumPy) and Excel, uncovering performance trends across 10+ Formula 1 race seasons.
- Performed data cleaning, data transformation, and data validation to ensure 100% data accuracy before analysis.
- Conducted Exploratory Data Analysis (EDA) using statistical methods to identify key patterns, KPIs, and performance metrics.
- Designed and developed interactive dashboards and reports in Power BI, improving reporting efficiency by 30%.
- Delivered data-driven insights and visualizations to support business decision-making and strategy planning.

Machine Learning Intern

Future Intern | Oct 2025 – Nov 2025

- Built an AI-powered Sales Forecasting system using Python, Machine Learning, and time series analysis, deployed via Flask.
- Developed a Customer Churn Prediction Model using Scikit-learn achieving 88% model accuracy through feature engineering and hyperparameter tuning.
- Performed EDA, statistical analysis, and data preprocessing to identify key revenue drivers and business patterns.
- Designed interactive dashboards and visualizations for real-time business intelligence and KPI monitoring.
- Delivered data-driven insights and analytical reports to support strategic business decision-making.

ACHIEVEMENTS

Hackathon Winner – IBM & 1M1B Collaboration

Sri Sairam Engineering College, Chennai

- Won 1st Place and cash prize worth ₹20,000 in a competitive hackathon organized in collaboration with IBM and 1M1B.
- Project "SafeHer – Smart Women's Safety Detection System" was recognized for innovation, social impact, and technical excellence among top competing teams.

Innovathon Winner – Plant Disease Detection

Sri Sairam College of Engineering, Bengaluru

- Won 1st Place and cash prize of ₹2,000 at college-level Innvathon competition.
- Project "Plant Disease Detection Powered by Deep Learning" was selected as the best innovative solution for smart agriculture and crop disease management.
